ENTSOG publishes new edition of Transmission Capacity Map

(Brussels, 18 July, PR0138) ENTSOG publishes a new edition of the European Natural Gas Network map. The 2017 edition shows the new Interconnector points (IPs) and updated capacities at cross-border points on the primary market.

The Transmission Capacity Map provides the most extensive and accurate overview of the transmission capacities currently offered in the European gas systems as of 1 January 2017.

Particular care has been taken to correctly reflect, using a simple colour scheme, whether the points offer physically bidirectional or virtual backhaul capacity. There is continued alignment between the content of the map and the Transparency Platform in terms of naming conventions, coding schemes and the data itself.

Jan Ingwersen, ENTSOG General Manager, said, *“The Transmission Capacity Map has developed into a highly appreciated information tool. It provides a comprehensive overview of the gas transmission network in and adjacent to the EU.”*

The Transmission Capacity Map can be ordered [here](#).

Should you require any further information, please contact Carmel Carey (+32 2 894 5136, media@entsog.eu).

Editorial notes

- > ENTSOG was founded on 1 December 2009 in line with Regulation (EC) 715/2009. The current number of Members, Associated Partners and Observers can be found [at this link](#).
- > In line with Articles 6, 7 and 8 of the Regulation (EC) 715/2009, ENTSOG has the task of formulating network codes in a number of areas and of adopting various communications: a non-binding community-wide Ten-Year Network Development Plan on biennial basis; Winter and Summer Supply Outlooks; common network operation tools; recommendations relating to the coordination of technical cooperation between community and third-country-TSOs; annual work programmes and annual reports.
