

Press Release

ENTSOG publishes its Transmission Capacity Map 2021

(Brussels, 5 November 2021, PR0257-21) ENTSOG has today published a new edition of its Transmission Capacity map, providing an overview of Europe's main high pressure transmission lines and providing information on technical capacity at cross-border points.

The Transmission Capacity Map 2021 provides a comprehensive overview of the transmission capacities offered in the European gas systems as of 1 January 2021.

The map provides information on technical capacity at cross-border points on the primary market, indicating for each whether the point offers a physically bidirectional or virtual backhaul capacity, by using a simple colour code scheme. Additionally, the different trading points and virtualised points are represented. The map content is developed based on operational information available on the [ENTSOG Transparency Platform](#) and is aligned in terms of naming conventions, coding schemes and the data itself.

The Transmission Capacity Map is available for download at the ENTSOG website [here](#) and hardcopies can be ordered [here](#).

Should you require any further information please contact Carmel Carey, External Communication Manager, at ENTSOG.Communications@entsog.eu.

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – www.entsog.eu or contact info@entsog.eu.
