

Press Release

ENTSOG publishes its interactive European gas flow data dashboard on a dedicated website

(Brussels, 5 April, PR0270-22) **Today, ENTSOG published its interactive dashboard of European gas flow data, based on aggregated data from [ENTSOG's Transparency Platform](#) and from the Gas Infrastructure Europe (GIE) [Aggregated Gas Storage Inventory \(AGSI\)](#).**

At the end of 2021, due to unexpected high gas prices and lower than usual EU gas storage levels, ENTSOG commenced the development of a dashboard to support stakeholders and policy makers to better understand and use data in relation to European gas flows, LNG, and storages.

The data are presented in an aggregated form, based on the gas supply corridors and risk groups as defined in Regulation (EU) 2017/1938 concerning measures to safeguard the security of gas supply (the 'Security of Supply Regulation'). This was done to ensure coherence with the terminology most often used by participants of the European gas sector. ENTSOG plans to update the data on a weekly or bi-weekly basis (depending on data availability). Going forward, ENTSOG will consider the feasibility of implementing more frequent updates, considering completeness and consistency of the data.

The dedicated website also makes available ENTSOG's Seasonal Supply outlook monitoring as a separate dashboard, presenting gas storage stock levels compared to the simulations undertaken by ENTSOG for its Seasonal Supply Outlooks. The data available in this dashboard will be updated on a biweekly or monthly basis going forward.

The European gas flow data dashboard is available on a dedicated website: <https://gasdashboard.entsog.eu>. It is also available on ENTSOG's website, [here](#).

Should you require any further information please contact External Communication Manager, Carmel Carey (ENTSOG.Communications@entsog.eu).

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – www.entsog.eu or contact info@entsog.eu.
