

Press Release

ENTSOG publishes an updated list of projects to be included in its Ten-Year Network Development Plan 2022

(Brussels, 21 October 2022, PR0279-22) Today, ENTSOG has exceptionally published an updated list of projects to be included in its Ten-Year Network Development Plan 2022 (TYNDP 2022). This is in response to the goals set out in the European Commission's REPowerEU Plan and its associated initiatives to diversify energy supplies and accelerate the rollout of renewable gases.

The basis for the TYNDP is an up-to-date collection of projects with European relevance, due to their contribution to a resilient network and support to the European energy transition. Following the usual TYNDP timeline, a list of TYNDP projects was published in March 2022.

Due to the Russian invasion of Ukraine and the commencement of new infrastructure initiatives to reduce Russian gas supply dependence (including the REPowerEU targets), ENTSOG reopened the project collection process. Between 30 May and 24 June 2022 Project Promoters had the opportunity to submit additional projects aiming to strengthen EU's security of supply and contributing to the energy transition, as well as to update already existing projects with the latest available information. The updated list includes 321 investments, including those associated with hydrogen, electrolysers, biomethane and necessary upgrades of natural gas infrastructure.

Piotr Kuś, ENTSOG General Director, commented, *"Approximately one third of the investments included in TYNDP 2022, 109 in total, are directly referring to the development of a dedicated hydrogen system by converting, injecting, transporting or storing hydrogen, compliant with the renewed TEN-E regulation. The updated list also includes new Floating Storage and Regasification Units and LNG-Terminal extensions projects, enabling additional supplies to Europe, as well as interconnection projects to increase the transport flexibility between EU-countries."*

In parallel, ENTSOG has commenced work on the system and gaps assessment in advance of the Draft TYNDP 2022 publication – planned to be published at the end of this year.

The published list of projects is available on the ENTSOG website [here](#), and its associated glossary of terms is available [here](#).

Should you require any further information regarding the data collection process, please contact:

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – www.entsog.eu or contact info@entsog.eu.
