

Press Release

ENTSOG publishes its Annual Work Programme 2023

(Brussels, 20 December, PR0284-22) **Today, ENTSOG published its Annual Work Programme (AWP) 2023, as required by Regulation (EC) 715/2009. This document outlines ENTSOG's expected activities and deliverables for the year ahead.**

ENTSOG will undertake work to facilitate the objectives of the RePowerEU Plan, which aims to reduce Europe's dependence on Russian gas and accelerate the rollout of renewable gases. To address the immediate and short-term security of supply challenges in Europe, the Regional Coordination System for Gas (ReCo System for Gas) will continue its 24/7 information exchange platform. ENTSOG's Transparency Platform, gas flow and seasonal supply dashboards will continue to provide up-to-date and relevant data to inform gas market stakeholders.

ENTSOG will also address the requirements of legislative for security of supply and will actively implement, once published, the requirements of the Hydrogen and Decarbonised Gas Markets package, an EU framework to decarbonise gas markets, promote hydrogen and reduce methane emissions. In advance of this, ENTSOG and its Members will continue to facilitate gas grids' constructive role in the energy transition, e.g., the repurposing, retrofitting and refurbishment of the gas grids for the transport of hydrogen.

ENTSOG General Director, Piotr Kuś, commented, *"ENTSOG is adapting to new challenges and new legislation, to make the gas grid resilient and decarbonised. Looking ahead to 2023 and the finalisation of TYNDP 2022, for example: a significant share of the investments included are directly referring to the development of a dedicated hydrogen system by converting, injecting, transporting or storing hydrogen, compliant with the renewed TEN-E Regulation."*

The Annual Work Programme 2023 is available [here](#).

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – or contact info@entsog.eu.
